PROJECT DESCRIPTION

The RII project was coordinated by the Emilia Romagna region. It aimed to launch, test and demonstrate the usefulness of some innovative strategies for land management and of some techniques for the interventions on water streams of the piedmont belt of the Apennines near Reggio Emilia, designed on the base principles of European Directives and aimed to address hydraulic and ecological problems of the lower order river network which is excluded from their application field, and of some legal-administrative tools to support the management of hydraulic risks and the environmental requalification of the territory.

The project ended in December 2016, and it is now in the "after LIFE" phase, through the implementation of the RII Pact, built on the example of the 'river contracts' .

PARTNERSHIP

- Servizio Difesa del Suolo, Della Costa e Bonifica della Regione Emilia Romagna
- Consorzio di Bonifica dell'Emilia Centrale
- Comune di Albinea
- Comune di Bibbiano
- Comune di Quattro Castella
- Comune di San Polo d'Enza

COMMON GROUND

Hydraulic-environmental requalification and improvement of the ecological condition of water streams
